

YEAR 2 SPRING 2 PROJECT HOMEWORK

This half term the children have been learning about rivers in the UK. They have learnt what counties the rivers run through and some of the human and physical features of these rivers. We are lucky to have a local river - the River Thames. During this half term please take time to research some information about our local river. Some facts you could include are:

- How long is the River Thames?
- What cities does the River Thames flow through?
- What is the River Thames famous for?
- What are the human and physical features along the Thames?

You could even visit the Thames and take some photos!

Be creative with how you present your project, think about how you could make your project unique....we will be giving prizes for the best projects in each class and these will be shared in the newsletter.
